## WHAT IS CLAIMED IS:

1.	Α	lateral	flow	immunoassay	device	comprising
----	---	---------	------	-------------	--------	------------

- a porous strip for enabling capillary migration of a fluid sample therealong;
  - a labeled reagent disposed on the strip, said labeled reagent being formulated for suspension in the sample migrating therepast;
- a captive reagent immobilized on the strip in a 10 path of sample migration, said captive reagent being formulated to bind to said labeled reagent to form a visible colored site on the strip; and

means for providing a complimentary color background for the colored site in order to increase visual perception of the colored site.

- 2. The device according to claim 1 wherein the means for providing a complimentary color background comprises dye incorporated into said porous strip.
- 3. The device according to claim 1 wherein the means for providing a complimentary color background comprises a transparent colored film disposed over said porous strip.
- 25 4. The device according to claim 3 wherein the film is suspended above said porous strip.
  - 5. The device according to claim 3 wherein the film is laminated to said porous strip.
  - 6. The device according to any one of claim 1 through 5 wherein the colored site is blue and the

15

30

complimentary color background is selected from a group consisting of yellow, yellow-orange and orange.

- 7. The device according to any one of claims 1 through 4 wherein the colored site is red and the complimentary color background is selected from a group consisting of green, light green, fluorescent green and lime green.
- 10 8. A lateral flow immunoassay device comprising:
  - a white porous nitrocellulose membrane for enabling capillary migration of a fluid sample therealong;
  - a labeled reagent disposed on the membrane, said labeled reagent being formulated for suspension in the sample migrating therepast;
  - a captive reagent immobilized on the strip in a path of sample migration, said captive reagent being formulated to bind to said labeled reagent to form a visible colored site on the strip; and
- an element for changing the white strip to a color which enhances visual perception of said colored site.
- 9. The device according to claim 8 wherein the 25 element comprises a dye incorporated into the membrane.
  - 10. The device according to claim 8 wherein the element comprises a transparent film disposed over the membrane.
  - 11. The device according to claim 10 wherein said transparent film is laminated to the membrane.

- 12. The device according to claim 8 wherein said element comprises a colored backing for supporting the membrane.
- 5 13. The device according to claim 8 wherein said element comprises a clear backing for supporting the membrane and a transparent colored film adhered to said clear backing.
- 10 14. The device according to any one of claims 8 through 13 wherein the colored site is blue and the enhancing color is selected from a group consisting of yellow, yellow-orange and orange.
- 15. The device according to any one of claims 8 through 13 wherein the colored site is red and the enhancing color is selected from a group consisting of green, light green, fluorescent green and lime green.
- 20 16. An improvement in a lateral flow immunoassay device having a strip for enabling capillary migration of a fluid sample therealong, a labeled reagent disposed on the strip and formulated for suspension in the sample migrating therepast and a captive reagent immobilized on the strip in a path of sample migration and formulated to bind to said labeled reagent to form a visible colored site on said strip, said improving comprising a color background for enhancing visual perception of said colored site.
- 30 17. The improvement according to claim 16 wherein said color background comprises a dye fixed in said strip.

15

20

- 18. The improvement according to claim 16 wherein said color background comprises a transparent film disposed over said strip.
- 5 19. The improvement according to any one of claims 13 through 18 wherein said colored site is blue and said colored background is yellow.
- 20. The improvement according to any one of claims 13
  10 through 18 wherein said colored site is red and said colored background is green.
  - A method for enhancing visual perception 21. colored site in immunoassay device, the an comprising a strip for enabling capillary migration of a fluid sample therealong, a labeled reagent disposed on the strip and formulated for suspension in the sample migrating therepast and a captive reagent immobilized on said strip in a path of sample migration and formulated to bind to said labeled reagent to form said colored site, said method comprising dyeing said strip a color which is complimentary to said colored site.
- 22. A method for enhancing visual perception of a 25 colored site in immunoassay device, an the device comprising a strip for enabling capillary migration of a fluid sample therealong, a labeled reagent disposed on the strip and formulated for suspension in the sample migration therepast and a capture reagent immobilized on said strip 30 in a path of sample migration and formulated to bind to said labeled reagent to form said colored site, said method comprising coloring said strip with a transparent film having a color which is complementary to said colors site.
